

## DATA SHEET

## NAVISITE MANAGED CLOUD SERVICES:

## Cloud Enablement Services

## Benefits

- Enterprise-Class Cloud Services & On-Boarding
- Quickly Identify Services and Applications Ready for the Cloud
- Seamless Physical to Virtual Migration
- Business Application Analysis Services
- Enables Hybrid Cloud Models
- Includes Performance Tuning and Load Testing

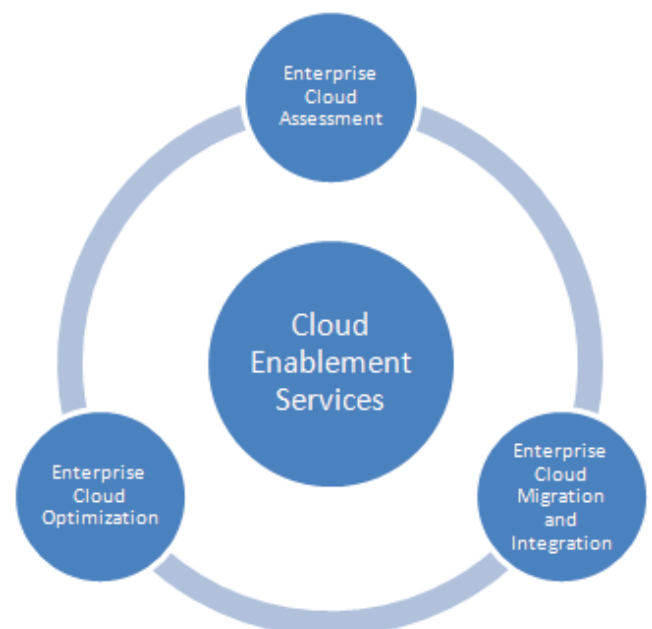

For enterprises moving computing resources to the cloud, and ISVs interested in SaaS-enabling application delivery, NaviSite offers a set of Cloud Enablement Services (CES) to ease and accelerate your migration to the cloud. NaviSite's CES include:

- **Enterprise Cloud Readiness Assessment**
- **Enterprise Cloud Migration and Integration**
- **Enterprise Cloud Optimization**

## Enterprise Cloud Readiness Assessment

Unsure how to best approach your migration to the cloud? NaviSite's experts will work closely with you to develop a roadmap for the migration of your infrastructure and applications to the cloud. Our team reviews all mission-critical technical, economic, and business factors to develop a plan that ensures your success.

- **Technical Analysis:** NaviSite analyzes your enterprise's existing IT infrastructure and applications to identify IT services best suited to the cloud. NaviSite's assessment covers key scalability and architectural issues, including modular design; Web server threads or application processes; and database transactions and I/O. NaviSite also analyzes critical application interfaces, such as Web services, to determine the optimal cloud migration path.
- **Economic Analysis:** NaviSite recognizes that economic considerations play a major role in the decision to migrate to the cloud. NaviSite works with you to build comprehensive ROI and TCO models that provide economic justification for cloud migration.
- **Business and Application Analysis:** Do you need to re-engineer your business processes to leverage the cloud? Do you need to need to comply with specific regulations, such as PCI, HIPAA, and GLBA? NaviSite works with you to identify and address key readiness issues.

## Enterprise Cloud Readiness Assessment

For enterprises ready to move to the cloud, NaviSite's recognized expertise in onboarding, managed services, and lifecycle management assures a smooth migration. NaviSite has a refined migration methodology – specifically designed for migrating infrastructure and applications to a cloud delivery model while mitigating risk – that addresses a range of requirements, including:

- **Physical to Virtual Migrations:** If you are migrating from a dedicated server environment, NaviSite can assist with the physical to virtual migration. NaviSite uses VMware tools to migrate your applications and servers into a VMware-powered virtual environment.
- **Project Management and On-Boarding:** NaviSite's managed services and lifecycle management experience has fine-tuned our methodology for managing customer migrations to cloud-hosted infrastructures. NaviSite's methodology is specifically designed for migrating applications and infrastructure to a cloud delivery model while greatly reducing your risk in the process.
- **Hybrid Cloud Models:** NaviSite offers flexible cloud solutions, recognizing that enterprises may want to migrate some – but not all – of their IT infrastructure and services to the cloud. NaviSite CES works with you to ensure that your on-premises infrastructure and applications are fully integrated with cloud-based resources. If you need your on-premises, cloud, or dedicated hosting based applications integrated, NaviSite's integration experts can help.

## Enterprise Cloud Optimization

With a cloud delivery platform, monthly charges are based on actual computing resources used. Therefore, it is critical that cloud-enabled applications run efficiently. NaviSite offers the following optimization services:

- **Performance Tuning:** NaviSite's application experts provide performance tuning recommendations to ensure you maximize the cloud investment.
- **Load Testing:** Load testing simulates high traffic volume for a large number of concurrent users. NaviSite's load testing service includes detailed analysis and reporting on that identifies when additional computing resources will be needed.

## ABOUT NAVISITE MANAGED CLOUD SERVICES (MCS)

NaviSite's Managed Cloud Services enable on-demand scalable provisioning of IT services including applications, servers, storage, and networks. The NaviCloud Platform offers unique enterprise IT advantages that tap into the core of NaviSite's application and enterprise infrastructure management expertise.

Designed specifically to meet enterprise IT demands, the NaviCloud Platform delivers services on best-of-breed technology infrastructure from leading vendors including Cisco Systems™ and VMware™ - all provided under one of the industry's strongest SLAs.

Whether supporting seasonal computing demand spikes, creating robust and cost-effective software testing and development environments, or building full application lifecycle management for mission critical enterprise applications, the NaviCloud Platform offers today's premiere cost-effective enterprise-class infrastructure option.
