

# NaviCloud Intelligent Storage:

BEYOND TYPICAL CLOUD STORAGE

With all the focus on cloud and cloud storage, it's easy for enterprises to think all storage solutions are the same. But enterprise-class cloud storage is not just about storing or copying large amounts of data to a remote data center in a cheap and easy manner. It's about providing organizations a flexible, scalable, secure and reliable solution to manage the increasing volume of enterprise data. NaviCloud Intelligent Storage (NCIS) provides enterprises not just basic storage but a solution that allows:

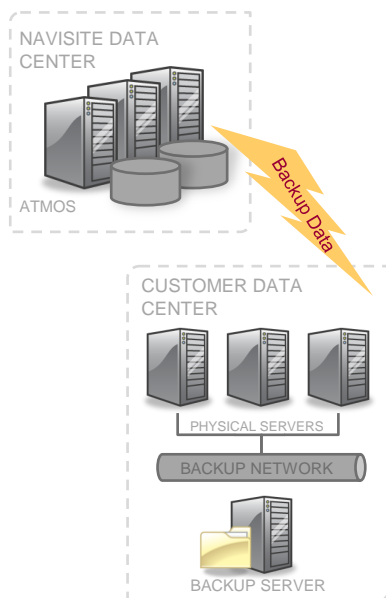

- Data backup and recovery
- Remote, secure storage and archiving
- Mobile file sharing and access
- Scalable, on demand growth

NCIS goes beyond traditional cloud storage to meet the storage and data access demands of enterprise organizations.

## NCIS for Backup and Archiving: Take Your Existing Backup Solution to the Next Level

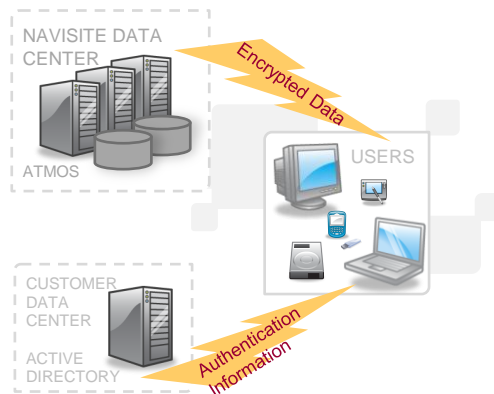

Backing up and storing enterprise data, no matter the type or amount, is critical for ensuring business continuity, as well as corporate data compliance. Given the criticality of data backup and retention many enterprises have invested in backup solutions either on-premises or within their own data center. But this addresses only part of a true business continuity strategy. It's also critical to have corporate information replicated to a secondary location. NaviSite's NCIS storage solution enables enterprise customers to connect their existing backup server technology into the cloud hosted NCIS platform for flexible and scalable backup to one of NaviSite's secure data centers without the hassles of deploying a new platform.

### NCIS FOR BACKUP AND ARCHIVING

## Secure Global, Mobile File Sharing and Backup with NCIS: Data Access from Anywhere and Any Device

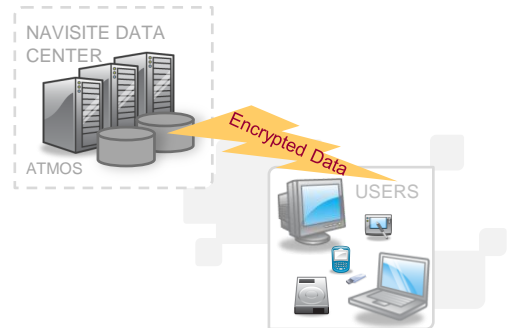

Mobility has become mainstream. Employees must be able to work from anywhere, and are looking to work from a variety of devices – corporate issued or not. But providing access and storage to an employee's files and information in a manner that will allow them to easily access that data from different devices while ensuring corporate security and compliance are part of the equation can be cumbersome and difficult. The alternative for many businesses is the use of consumer cloud storage solutions, like Dropbox, by employees for corporate files which likely violates corporate security and compliance policies. NCIS with Gladinet allows enterprise IT departments to provide their employees with the ability to store files and information in a cloud-based, secure and controlled environment that can be accessed from a variety of devices over the internet.

## NCIS Storage-as-a-Service: Simple, Reliable, Secure, On-demand Cloud Storage at Your Fingertips

In addition to a variety of enterprise specific use cases, NCIS provides fast, easy, on demand enterprise storage to the cloud for smaller environments while leveraging the same robust platform.

Leveraging the EMC Atmos platform with Geodrive, NCIS delivers storage-as-a-service ease and flexibility with enterprise security, reliability, and performance built in. Enterprise IT can quickly enable the ability to seamlessly store data in a secure cloud environment allowing for easy data access and retrieval in today's real time world.

## NaviCloud Intelligent Storage Built to NaviSite's Enterprise-class Standards

As with NaviSite's entire NaviCloud portfolio of solutions NCIS delivers a true enterprise class solution. It's also available to customers with an in-house NAS platform and can be used to archive less frequently accessed data to the cloud in order to extend the life of the existing hardware. Data stored just for compliance purposes can be kept in the cloud but is automatically retrieved when required without the addition of any complicated archival software.

Enterprises pay for only the data they need to store within a NaviSite data center and can easily add storage in an additional data center for only a minimal additional charge. NCIS is also backed by NaviSite's NaviCloud SLA commitments for customer peace of mind.
