ENTERPRISE MOBILITY MANAGEMENT

NaviSite’s policy-based Enterprise Mobility Management (EMM) solutions can help enable the enterprise to propagate compliance and operations standards to users across the organization.

This centralized control extends the reach of best practices and can help augment the efficiency, effectiveness, and integrity of a company’s mobile operations.

Enterprises today are perhaps best characterized by their growing reach and increasing national or global sprawl. Modern enterprises are experiencing a fundamental shift in operations which emphasizes the need for an agile, dynamic interplay among an increasingly distributed workforce.

Many professionals require untethered mobility, augmented by seamless access to essential tools and communications resources. For some organizations, enabling such mobility can be intimidating yet necessary.

Enterprises must strike a balance between controlling business assets and accommodating unhindered performance, all frequently complicated by the blurring of the line between personal and professional assets.

A SECURITY RESOLUTION FOR THE ENTERPRISE MOBILE WORKFORCE

For organizations facing challenges securing data and technology assets, a Mobile Device Management (MDM) solution represents one of the most prudent courses to establishing a productive and controlled enterprise mobile environment. Mobile trends, like Bring-Your-Own-Device (BYOD), increase the importance of establishing a structured means for enforcing policy-based compliance, enhancing asset security at the end-user level and positioning the enterprise for flexible growth as the organization evolves.

ENHANCED MOBILITY MANAGEMENT FOR THE MODERN ENTERPRISE

NaviSite’s Enterprise Mobility Management (EMM) solutions provide a full range of capabilities and controls to organizations addressing dilemmas born from enterprise mobility. These solutions are comprised of both managed and self-service resources, allowing for the most relevant and effective service delivery possible, with the support of NaviSite’s dedicated team of experts.

Leveraging best-in-class technologies from AirWatch by VMware, NaviSite’s EMM solutions ensure that businesses are armed with the resources necessary to direct enterprise mobility, not simply tolerate mobile device management.
DIRECTING ENTERPRISE MOBILITY

For many enterprises considering an MDM solution, a principle concern is frequently the manner in which such a solution will fit into their plan for growth and change. In these scenarios, companies take steps to accommodate the solution and its functionalities, often finding it necessary to make concessions.

NaviSite has developed its EMM solutions not only to integrate with a business’ strategic internal initiatives, but to extend the realm of possibilities for future innovation. NaviSite’s EMM solution gives control back to the organization, and can deliver deep insight into the resources, permissions and standards available to end users.

The powerful self-service portal enables administrators to create new users, to generate reports and to administer resource permissions, among other essential controls. With pointed, role-based access, enterprises can better govern the changes that impact mobile operations, without impeding productivity.

By leveraging NaviSite’s hosted and managed Microsoft Exchange services, NaviSite’s EMM solutions can further influence security, collaboration and business continuity.

FLEXIBILITY AND FUNCTIONALITY WITHOUT A BLOATED BUDGET

NaviSite’s EMM solution provides a suite of powerful service and resource options, each uniquely suited to address key areas of concern among today’s increasingly distributed enterprise workforce.

• **Mobile Device Management** – Control access to enterprise assets, encrypt sensitive data, enforce compliance and security standards and more.

• **Mobile Application Management** – Distribute, track, update and secure critical applications, over-the-air, on an array of end-user devices.

• **Mobile Content Management** – Provide a secure, streamlined way to share, to sync and to edit enterprise- and user-generated content.

• **Containerization and Workspaces** – Establish a complete and controllable separation of corporate and personal data.

• **Software Development Kit** – Secure enterprise applications leveraging app wrapping, testing, user authentication, geo-fencing, branding and significantly more.

NaviSite ensures your mobility strategy is reinforced by a team of AirWatch by VMware-certified experts ideally suited to help your organization to achieve peak performance.

ABOUT NAVISITE

NaviSite, Inc., a Time Warner Cable Company, is a leading international provider of enterprise-class, cloud-enabled hosting, managed applications and services. NaviSite provides a full suite of reliable and scalable managed services, including Application Services, industry-leading Enterprise Hosting, and Managed Cloud Services for organizations looking to outsource IT infrastructures and to help lower their capital and operational costs.
