Whether you are upgrading from aging physical infrastructure, expanding to support new initiatives or locations, or seeking a scalable, reliable and secure infrastructure to meet fluid business demands, the cloud can help you unleash your organization’s potential. Selecting a managed cloud solution provider capable of performing the complete migration can simplify your transition to the cloud. Working alongside Navisite’s experts, the complete cloud migration service delivers a tailored cloud infrastructure optimized for your needs. Once migrated, you can seamlessly transition to Navisite managed services for ongoing cloud management, monitoring and support.

Engage Navisite for Your Cloud Migration

Navisite Professional Services brings expertise in cloud platforms, a set of best-of-breed tools and accelerators, and a proven methodology to ensure migration success. Navisite can migrate your applications and databases, including SaaS migrations. As a result, your enterprise will benefit from our expertise and save time and resources while minimizing project risk and migration downtime.

As your managed cloud services provider, Navisite has a vested interest in ensuring your cloud migration is well planned, correctly designed and ready for ongoing operations. To achieve these mutual goals, the Navisite Cloud Migration service focuses on three important phases: plan, design and migrate.

Plan Phase
In the plan phase, you and Navisite identify key stakeholders in your organization and establish project governance. Navisite performs migration sequence planning and application move group definition, develops a phased migration approach, identifies test plans and develops detailed cutover plans for moving to the new cloud environments.

Design Phase
In the design phase, Navisite experts develop a cloud architecture and design that is driven by application and workload requirements. This accounts for application placement, performance and scalability requirements, disaster recovery, security and compliance, and more.
Successful Migration through Planning and Assessment

Many cloud migrations do not meet their business objectives because of a lack of discovery and planning. Thorough discovery, assessment, planning, and cost projections are the keys to a successful migration. Navisite's related Cloud Assessment service provides the foundational insight required to start a cloud migration with confidence.

Also included are network and connectivity recommendations and cloud instance sizing for compute, storage and networking configuration, as well as a complete cloud resource list. Finally, the design phase covers planning for the cloud service assurance and operations model, service levels, and a governance model.

Migrate Phase

During the migrate phase Navisite experts provision the cloud environment, stage move groups, perform testing and execute a phased cutover. The migrate phase also includes post-cutover testing, operational management handover and decommissioning source systems.

Service Assurance

After completing your migration, you can seamlessly transition to Navisite's managed cloud services for production management, monitoring and maintenance of your new Microsoft, VMware or hybrid cloud environment and infrastructure. With Navisite acting as an extension of your IT team, you are free to focus on enabling IT to unlock additional business goals.
