SERVICE BRIEF

SELF-SERVICE NAVICLOUD®

A Time-proven, High-transparency Cloud Platform

at a Glance…

- Self-Service NaviCloud® is an ideal choice for short-term or test/dev projects and for organizations with experienced cloud IT teams.

- As a multi-cloud provider, Navisite® offers Self-Service Cloud, Managed Cloud on multiple platforms and traditional, bare-metal solutions.

- With Managed Cloud, experts help relieve the burdens of routine cloud management and maintenance.

While Managed Cloud solutions are designed to liberate core IT teams from the burdens of routine, tactical maintenance and management without sacrificing visibility or control, in some instances, expert management may not be required or is available in-house. To address these scenarios, Navisite offers our reliable, transparent Self-Service NaviCloud platform.

Especially suited for short-term and test/dev projects, Self-Service NaviCloud empowers clients to rapidly spin-up new cloud environments and scale cloud resources, including servers, storage, networks, bandwidth and more. All NaviCloud resources are provisioned into one of Navisite's own secure data centers in either the US or UK.

Built-on a Proven Hypervisor

Self-Service NaviCloud is built on VMware's vCloud Director® technology. clients have the option of managing their cloud environment via Navisite's Proximity client portal or the native vCloud Director interface. WMware APIs are also available to support further integration.

Key Self-service Cloud Benefits

- Some of the primary benefits Self-Service NaviCloud clients realize include…

- Software Defined Networking (SDN) technology.

- Multiple virtual machine (VM) templates for Windows, Red Hat Linux and CentOS.

- Flexible architectures to support various app configurations and compliance.

- Continuous visibility into system usage, configuration, performance, etc.

- Integration with other Navisite managed services to support multifaceted needs.

Cloud Onboarding and Migration

To better enable clients to migrate their legacy IT environments to Self-Service NaviCloud with ease, Navisite offers multiple cloud onboarding resources and services. To find out more about these offerings, please view the Cloud Onboarding and Migration brief, or contact Navisite directly.

A Closer Look at Self-service Cloud

Client Spotlight

"We candidly consider Navisite one of our most key vendors. Navisite can support a company of our size and complexity with our level of requirements and expectations. They prove it time and time again."

- Lloyd Dawson,
Vice President of IT

Flexible Delivery Models: Managed, Self-Service AND Hybrid

You don't have to choose from 100 percent Managed or Self-Service Cloud. For example, clients often use Self-Service Cloud for test/dev, and then transition workloads to Managed Cloud when they're ready for production.

Similarly, while transitioning all workloads to the cloud is a common goal, in the near-term a hybrid approach is often practical. For example, an organization may opt to keep a difficult-to-transition workload in its legacy data center, while migrating all other workloads.

Considering NaviCloud is provisioned into one of Navisite's own dependable data centers, we can also provide Managed Hosting of physical servers from the same facility in which your NaviCloud resources are located to help enable low-latency for complex workflows.

Exploring a Simpler, Fully Managed Cloud Solution

As an experienced, managed multi-cloud provider, Navisite's Managed Cloud solutions can help you remain in control of your cloud environment and enjoy continuous visibility into usage, performance, etc., while Navisite's experts handle laborious, tactical tasks.

Managed NaviCloud® - Leveraging VMware's powerful hypervisor, this platform provides a cloud infrastructure in one of Navisite's US or UK data centers.

Navisite Managed Azure® - Provisioned into a Microsoft data center worldwide*. Designed for scaling of cloud native apps and integration with Microsoft solutions.
