

Navisite Azure Management Services for Healthcare

Decrease costs, increase flexibility, compliance and security.

Microsoft Azure is the fastest growing cloud platform, in no small measure because it offers the largest amount of compliance protections of any public cloud provider, especially HIPAA, with its 86 services.

Scalability, analytics and multi-cloud implementation support are some of the main reasons for Azure's popularity among healthcare CIOs. Azure is powerful, robust and complex. If you're thinking about Microsoft Azure, you'll want to consider a reliable managed cloud service partner to simplify embarking on your cloud journey and to ensure your organization gets the business value from Azure that you expect.

Migration and management challenges

Microsoft Azure is an excellent cloud platform for building new cloud-native applications as well as migrating onpremises applications. Once you're live on Azure, your IT team needs to manage these applications as Azure—and your business application requirements—evolve.

To accomplish this, you need a comprehensive service assurance and governance plan, and the expertise and skills to manage your Azure implementation effectively and to commit resources, efficiently. We can augment your IT team and save you effort and resources, while reducing the expense and project risk of deploying critical business processes and applications to the Microsoft Azure cloud, and we can provide the expert security and HIPAA compliance management you need.

Navisite managed Azure

The Navisite Managed Azure service is designed to make deployment, migration and management of your Azure cloud as simple and successful as possible. Our experts will work with you to cut through the complexity of Azure to assess, plan and complete a secure and efficient managed migration or new application deployment. Once live, we will relieve the burden of proactive Azure monitoring, maintenance and support—keeping you informed at all times with a 360-degree view of your environment via the Navisite Proximity client interface. As a result, your enterprise will save time and IT resources, while reducing risk and downtime.

Your business comes first

Our unique approach to managed Azure centers on how we work with you. We take a business-first approach

to align IT operations with your business needs to support continuous innovation. With Navisite Managed Azure, we design and build an Azure architecture with an application-centric viewpoint, and rightsize your infrastructure so it meets your business and technical requirements. Because we are a managed service, we share responsibility for the jointly designed infrastructure that we collaboratively manage with you.

Tailored and optimized

We strive to create solutions designed specifically for your business application and data needs. Our workload-based approach delivers tailored infrastructure architecture, unlike pre-packaged, one-size-fits-all infrastructure deployments offered by others. We further seek to optimize your Azure infrastructure to manage cost, reduce risk and reduce downtime. And, we make sure the architecture is flexible and configured to deliver the agility to handle change as your business needs evolve.

A fully-transparent, co-managed solution

The Navisite Proximity client interface provides a 360-degree, fully-transparent view of your entire cloud infrastructure – including Azure and other private or public clouds – empowering you to make the most of your cloud investments. We provide a co-managed solution with an assigned service manager from Navisite, so details about the status, performance and usage of your cloud assets are available 24x7 to your IT team.

Proactive management

Proactive usage analytics anticipate future Azure infrastructure needs, allowing you to plan ahead and smoothly scale up or down as required. We offer automated alerting to identify potential technical issues before they impact business processes. Our

comprehensive always-on monitoring runs across a range of cloud services, including multi-cloud instances and networks, and can cover your Azure public cloud implementation and any private cloud deployment you may also be running.

Security and HIPAA compliance

Our Managed Azure service includes expert security and compliance management specific to healthcare organizations. We provide market-leading security tools, expert security management, 24x7 monitoring and all of the controls required for you to meet HIPAA compliance. We are also willing to sign HIPAA Business Associate Agreements.

17-plus year Microsoft partnership

Navisite is heavily invested in Microsoft, and we're able to provide expert services to manage your Azure cloud with over 450 Microsoft-certified engineers and administrators. Navisite is an Azure Expert MSP and Azure Center of Excellence, giving you the "power of two" that comes from close alignment with Microsoft. Our Managed Azure service includes direct escalation to Microsoft Premier Support on your behalf, when needed, for the fastest incident resolution.
